

REMARKS

New dependent claims 93-100 have been added to recite that an irradiating step is performed to distribute a metal containing material for promoting crystallization of a semiconductor film. In addition to the arguments already of record, the Applicants respectfully submit that Suzawa, Chen, and one or more of Masumo, Takeuchi, Liu and Serikawa, either alone or in combination, do not teach or suggest the above-referenced features of claims 93-100. Therefore, the Applicants respectfully submit that new claims 93-100 are also in condition for allowance.

Respectfully submitted,

Eric J. Robinson
Reg. No. 38,285
